

Vice s.r.l. is a young a dynamic company, producing and distributing chemical products for the corrugated board industry. It was founded thanks to the tenacity of two men, who believed in their dreams and created a project based on high chemical skills and true love for their job.

Steady and significant investments were carried out with the aim to further develop the company. Since its foundation, Vice s.r.l. increased its know-how, gained new market shares and increased the number of employees. These people brought their specific knowledge and creativity, and contributed to the growth of the company. The corporate philosophy is focused on the promotion of each specific skill, as well as on the detection of new solutions to meet the needs of the complex global market of the corrugated board.

This is a significant challenge, and more than satisfying results were achieved in the years: Vice gained a leadership position in the production and distribution of chemical products for the corrugated board industry. To date, Vice covers 80% of the national market. This led to an increase of the productive capacity and, during the summer of 2016, the decision was made to move to a bigger site. The transfer is expected to take place in the spring of 2017.

Vice s.r.l is a solid reality in the Italian market, and the next target is to expand beyond the national borders. This is why, during the last years, Vice has regularly attended international events such as SinoCorrugated, CCE International, etc.

Vice is going to attend the Third Edition of CEE International in Munich, in order to meet potential foreign partners to export its range of chemical products for corrugated board beyond the Italian border. The company has the potential to take this step.

Focusing on the relationships with its partners is a must for Vice: this is achieved by providing direct support, ensuring a continuous exchange of information, paying specific attention to the Client's needs and trying to satisfy their expectations.

Attending CCE International in Munich for the second time is a great opportunity to introduce some innovations in the chemical industry.

These innovations are in line with the environmental friendly approach that Vice has been implementing since years.

The protection of the environment is a key value for Vice, and corporate research is focused on raw materials with low environmental impact and almost no dangerousness, if possible.

Vice was among the first companies to provide a broad range of alternative solutions to powder borates in the corrugated board industry.

The R&D department is committed to detect new solutions with low environmental impact, and the company is very proud of its high skilled technicians and well-equipped internal laboratories.

Vice is a point of reference for competitors and this provides a stimulus to further research and increase experience in the field.

Despite its steady evolution, the paper and cardboard packaging industry requires further stimulus. There is still so much to be done and we are aware that our chemical solutions may significantly contribute to this end.

Looking carefully at Vice, you understand that a great company is not necessarily a big company; what makes a company great is its ability to detect new needs and requests from the market. Such needs shall be interpreted as starting points to conquer new ambitious targets within the framework of the global competition, which leads us to go beyond our limits.

Study, research and innovation are the keywords of Vice, a high-skilled company whose know-how characterizes the 'Made in Italy' throughout the world.
